# Setting up your Apple TV

How to configure your  
Apple TV's network.

**Telkom**

## Apple TV Network Configuration

### Network Configuration

Have your network password (if you use one) and your Apple Remote handy to Configure your Apple TV. Make sure there are no obstructions between the remote and Apple TV.

- If you use a wired Ethernet network to connect, your Apple TV will automatically detect your network settings. You will just have to make sure that your Modem is connected to the internet

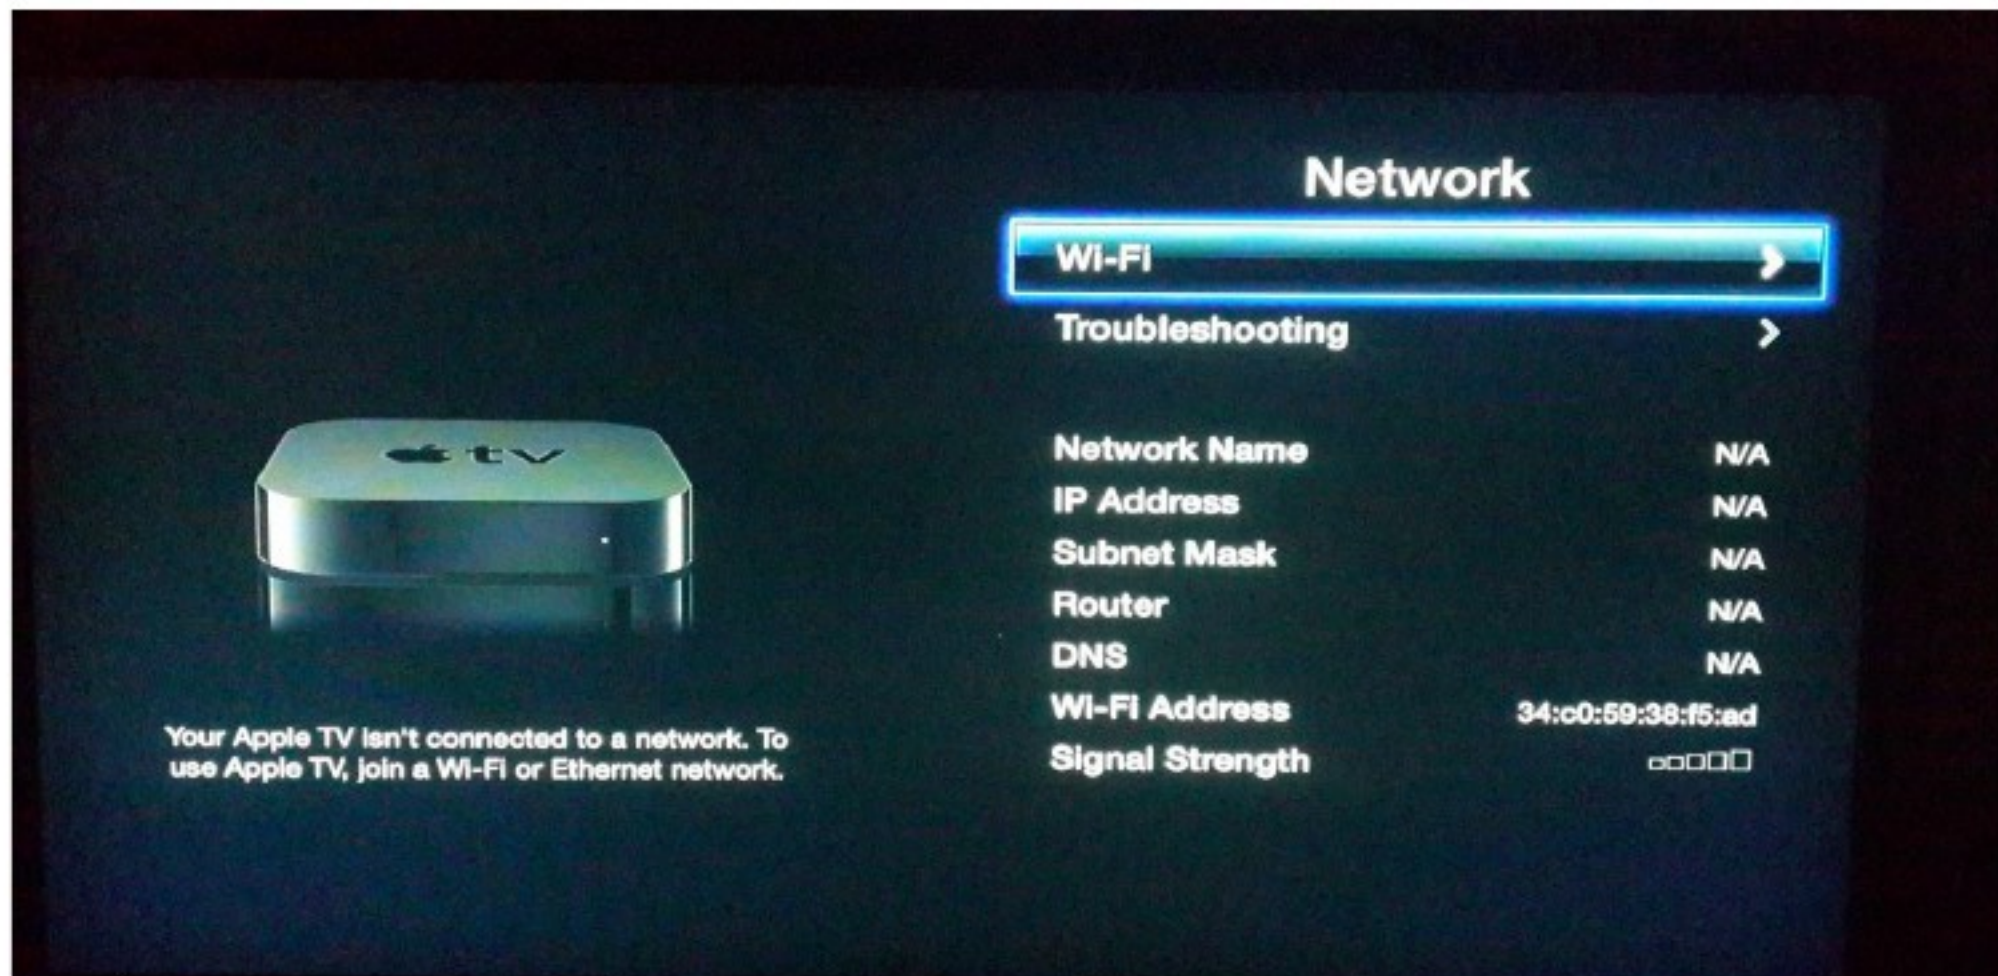

On the home screen select settings Icon and click middle button on remote

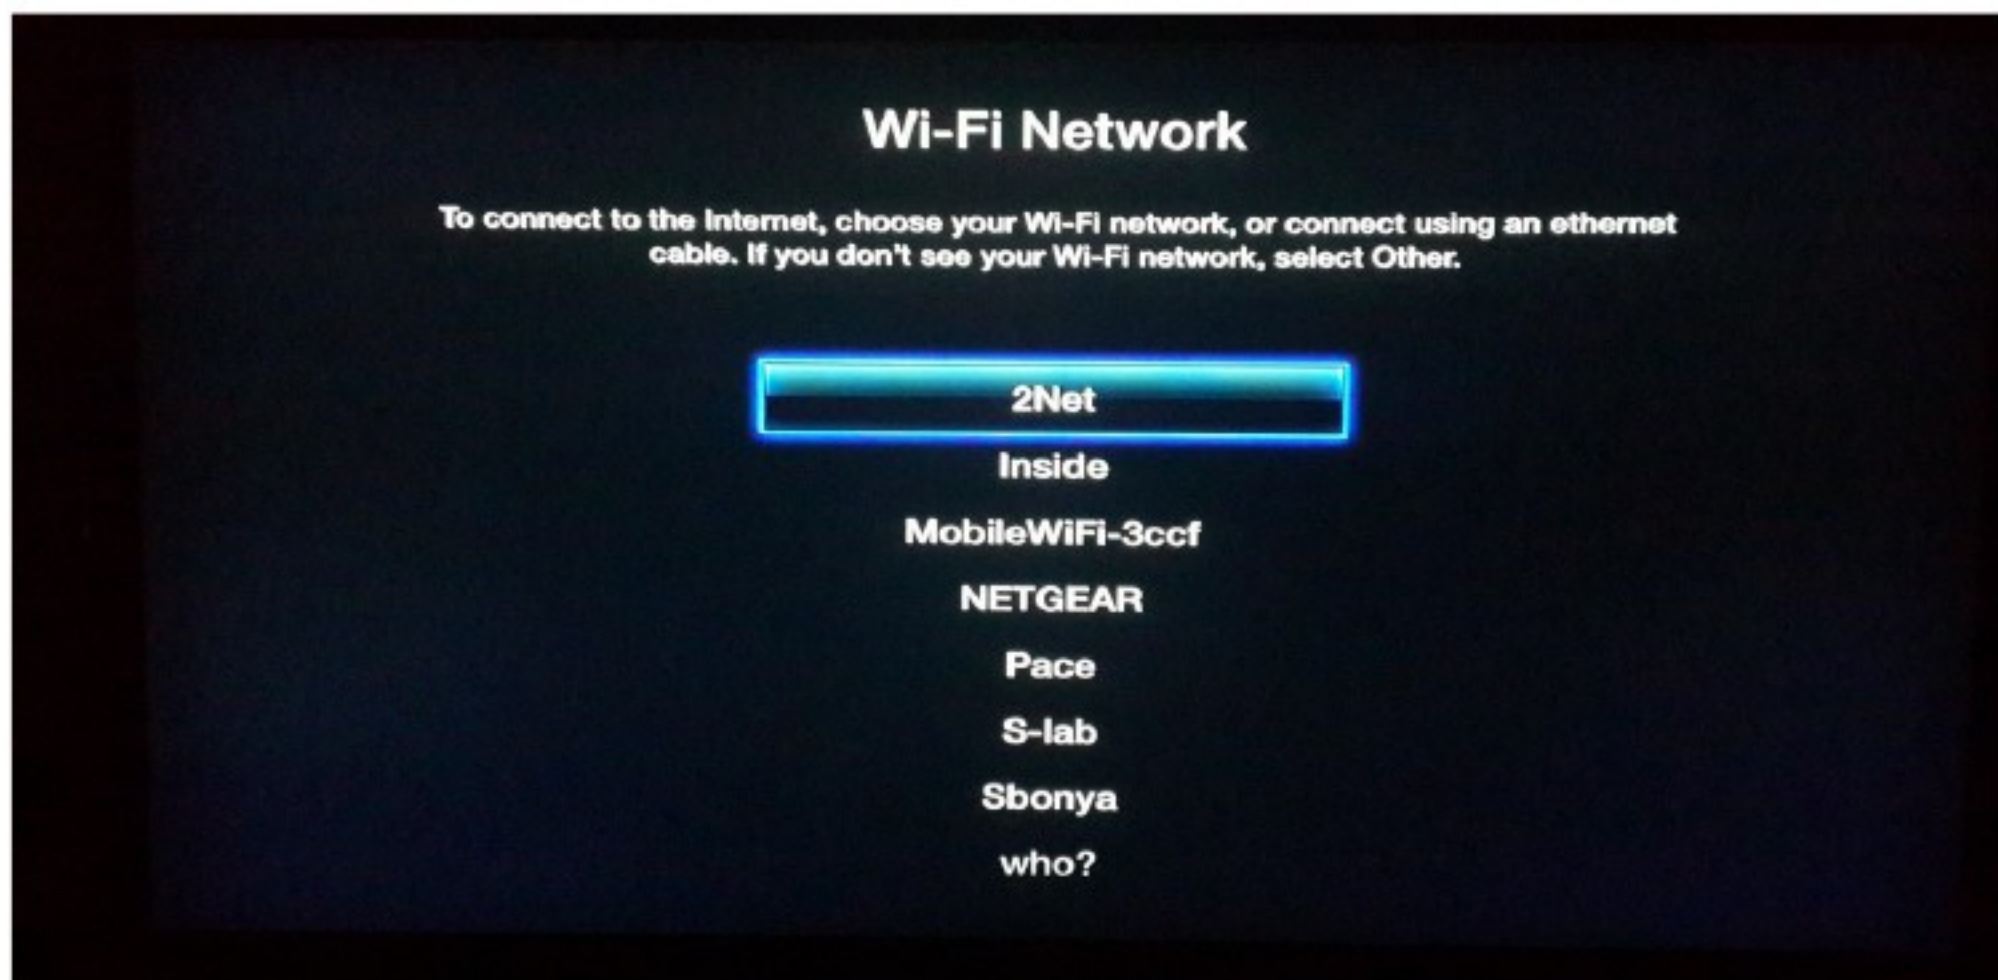

Select general and click middle button on remote

Select network and click middle button on remote

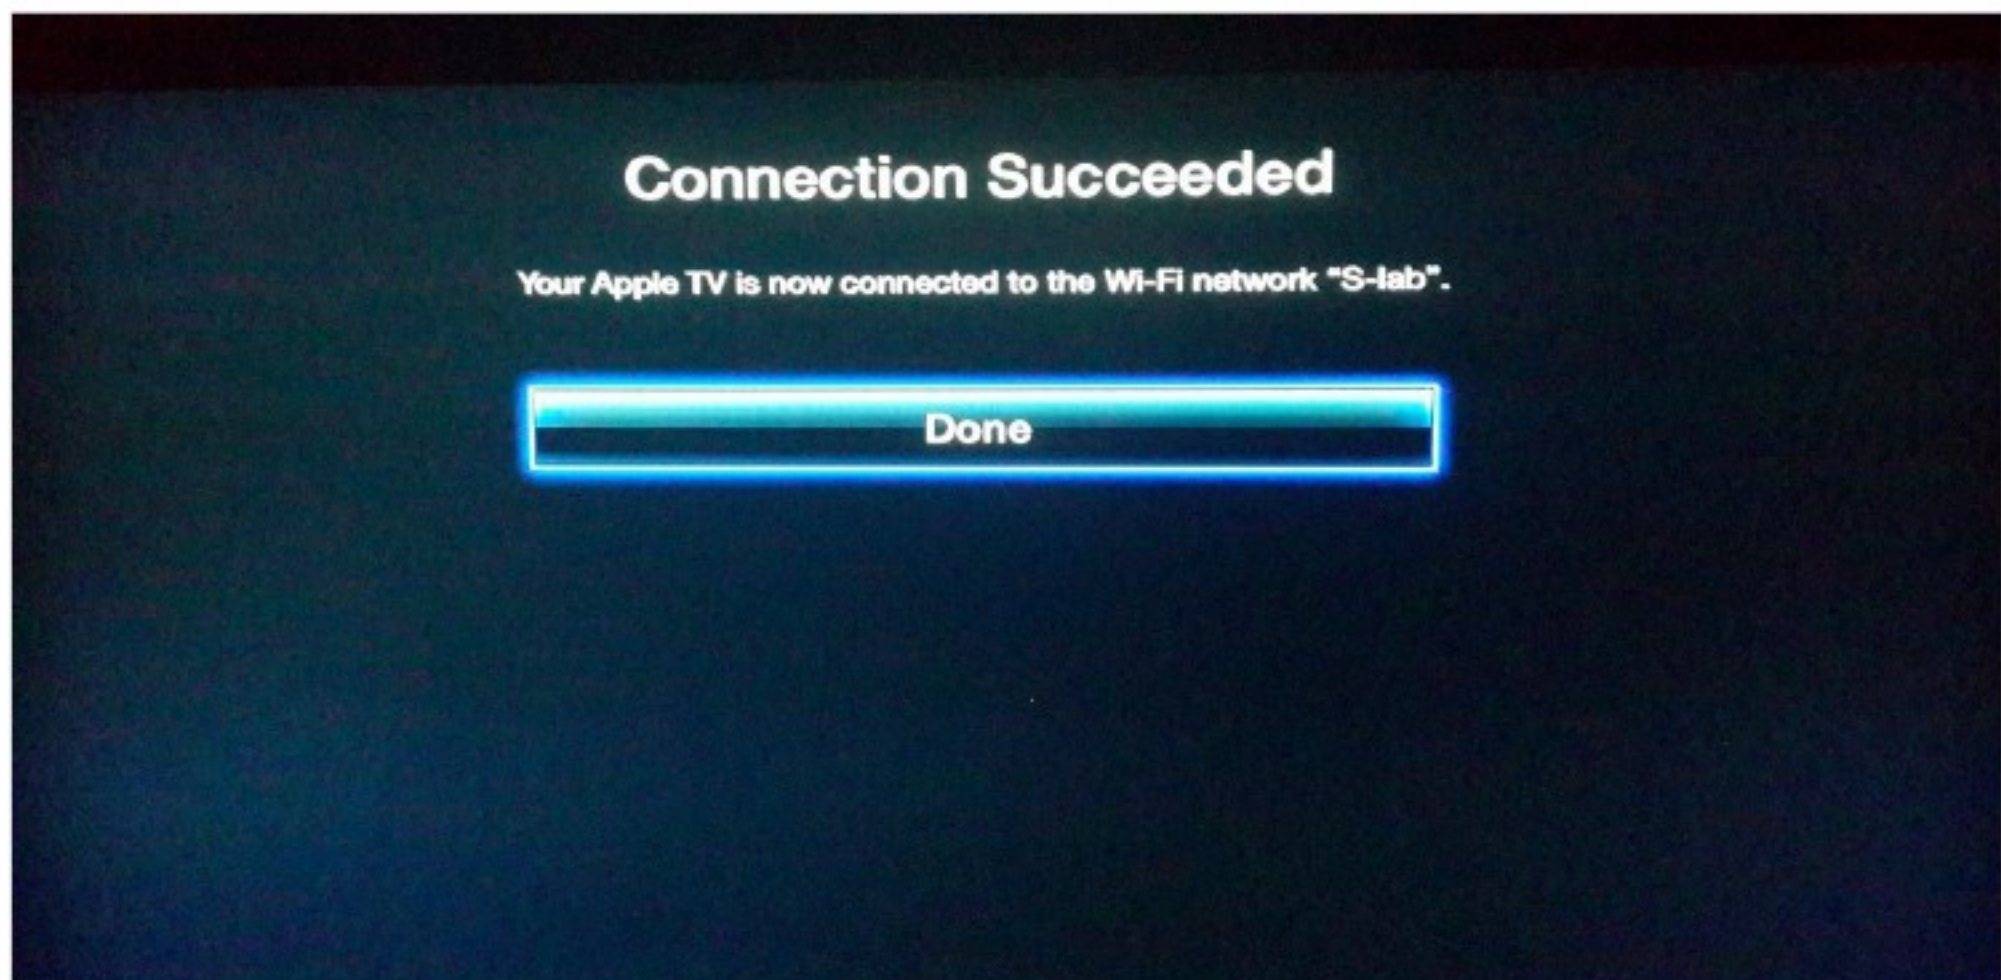

Select Wi-Fi and click middle button on remote

Choose your Wi-Fi modem from the list and click middle button on remote

Enter your Wi-Fi password and select submit and click middle button on remote

Your Wi-Fi is now connected select done and click middle button on remote
